

PD Topical Anesthetic Paste

Paste for desensitizing gums

Composition

Benzocaine 18%, Raspberry flavour, excipient ad 100%

Properties

PD Topical Anesthetic is a stable paste ready for use. It has a specific analgesic action which is recommended as a superficial treatment prior to a hypodermic injection & for the treatment of sensitive gums.

Indications

- Local anesthesia of the gum prior to a hypodermic injection
- Superficial analgesy prior to the extraction of deciduous teeth

Directions for use

Apply directly to the sensitive gum.

Precaution

Do not use with patients who are allergic to Benzocaine.

Storage

Store at room temperature between 5°C & 30°C, protected from direct light.

Packaging

Bottle of 30ml (BUBBLE GUM or STRAWBERRY)
